High Intensity Focused Ultrasound

DEFINE, SCULPT &
CONTOUR USING
ULTRASOUND

▼ WHAT IS HIGH INTENSITY FOCUSED ULTRASOUND (HIFU) ?

Hifu is truly a remarkable breakthrough in technology, offering a truly non-invasive alternative to a surgical face lift, a MUST have treatment option, and the ONLY FDA approved treatment with a specific intent for improvement of lines and wrinkles on the face and décolleté, penetrating to depths only previously possible with surgery.

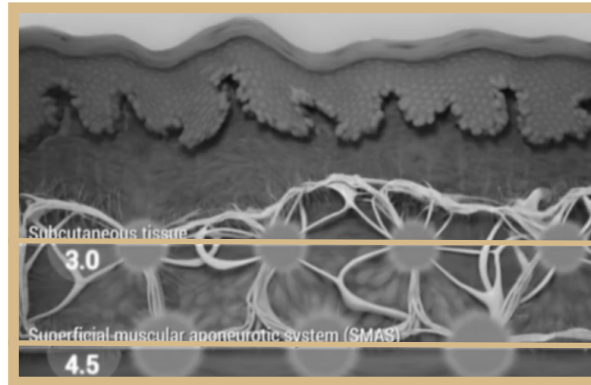

Hifu uses the power of Ultrasound to safely lift and tighten skin. Ultrasound is a form of energy that is significantly different than light such as IPL and Lasers or Electrical (Radio-Frequency) energy. Hifu, protects the skin surface, whilst precisely penetrating at deeper depths and higher temperatures than Radio Frequency for example, treating beyond the Dermis and Foundation layers, where structural weakening starts.

Tissue at the target point is heated to ~65°C, Thermal Heat is created with the skin tissue creating both spaced 'wounds' and cellular friction - which in turn promotes healing, immediately contracts collagen and stimulates a rapid production.

Over the next 90-180 days, the wound-healing response stimulates long-term tissue and leads to further lifting and tightening, with results that can last years.

▼ DO I HAVE TO DO ANYTHING BEFORE MY TREATMENT?

A consultation is always needed as this will give us a chance to assess your requirements and will help us to understand what results you are looking for so we can find the perfect solution for you.

With the advantage of three depth cartridges, HIFU has the capacity of penetrating to depths only previously possible with surgery

▼ HOW LONG IS THE TREATMENT?

Each session is dependent on the treatment area, but we advise around 30 minutes per area. Your treatment will be tailored to your individual requirements which will be discussed in your pre-treatment consultation. Additional time will be required if you require more areas.

▼ WHEN ARE RESULTS VISIBLE?

Some results will be seen immediately post-treatment, with optimum results expected from three to six months.

▼ HOW MANY TREATMENTS ARE REQUIRED ?

The number of sessions depends on the client's age and skin condition. One treatment is usually sufficient on light to moderate skin laxity.

▼ WHO IS SUITABLE FOR ULTRA FACE?

Anyone with drooping skin, or considering a face lift but isn't ready for surgery is a good candidate.

▼ HOW LONG DO RESULTS LAST?

Individual results will differ, however on average a minimum of 18 months to two years.

▼ BENEFITS

- clinically proven
- safe and effective
- cost-effective alternative to a surgical face lift
- no need for anaesthesia or sedation
- no incisions or risk of infection
- no downtime
